Allowable Subject Matter

1. Claims 1-12 are allowed.

Independent claim 1 recites an image control apparatus including "...repetitive number control means for adaptively controlling the number of repeated B pictures to be inserted into a stream based on the compared result of the comparison process which is carried out by said comparison processing means and increasing or decreasing the number of the B pictures in the stream during the process of coding the image signal..." which are features that are not anticipated nor obvious over the art of record. Independent claim 6 recites an image control apparatus including "...picture insertion control means for inserting an I picture into a stream during the process of coding the image signal if a scene change is detected by said scene change detecting means and inhibiting a reference to a predicted value across and over the I picture which is inserted as a scene changing view..." which are features that are not anticipated nor obvious over the art of record. Independent claim 12 recites an image control apparatus including "...repetitive number control means for adaptively controlling the number of repeated B pictures to be inserted into a stream based on the compared result of the comparison process which is carried out by said comparison processing means, and increasing or decreasing the number of the B pictures in the stream during the process of coding the image signal; scene change detecting means for detecting the occurrence of a scene change based on an interframe difference average representing an average of interframe differences of one picture; and picture insertion control means for inserting an I picture into a stream during the process of coding the image signal if a scene change is detected by said scene change detecting means, and inhibiting a reference to a predicted value across-and over the I picture which is inserted as a scene changing view..."
